AI Disclosure Log

Fill in one row every time you use AI on this project. The log shows your thinking: what you asked, what AI gave you, and what you did with it.

Student Name:	Christine Scheller	**Class Period**	0
Project:	PD Session Activity	**Due Date**	November 1, 2026

Tier for this project:

- ☐ Yellow (narrow use)
- ☑ Green (guided use)

AI tool(s) used:	Claude (Anthropic)
Permitted use:	Teacher planning: building and revising a website from my own tier guide and assignment scenarios. I make the design and content decisions and test the site before using it.

Never paste personal information into an AI tool: no full names, photos, addresses, school name or passwords.

Before keeping any AI-generated code, check each box that applies.

- ☑ I stayed within the permitted use for this assignment.
- ☑ I can explain everything I kept, in my own words.
- ☑ I checked facts, numbers and sources against something reliable
- ☑ If it was code or a solution, I tested it and it works the way I intended
- ☑ It fits what the assignment asked for and what we've learned in class.
- ☑ I changed it to reflect my own thinking, voice or ideas.

Reflection

Answer in two or three sentences each.

1. What did AI get right?

   It turned my tier guide into a working, polished site very quickly, wrote the Google Sheets code for collecting responses, and found and fixed a navigation bug.

2. What did AI get wrong, misunderstand, or do in a way that didn't fit our class? How did you notice?

   Some of its choices didn’t fit: the bright yellow was hard to read, and the email feature added complexity I didn’t need. There were several tweaks that needed to be made to make it more efficient and useful. I noticed by testing the site and thinking about how teachers would actually use it.

3. Point to the part of this assignment you’re proudest of. How much of it was your own thinking?

   The tier guide content and the assignment scenarios are ours, along with the decisions about structure, colors and features. AI wrote the code for the website with style guidance from us.

4. What could you now build without AI that you couldn't before this project?

I can update the assignment scenarios, change colors and publish the site to GitHub Pages myself. I asked Claude to clarify some sections of code in case I wanted to tweak it in the future, and when it implemented cool features, I asked it to explain the code for me so I can reference those features in the future.

LOG

Add rows as needed (right click a cell and select "Insert Row Below" .

#	Part of the assignment	What I asked	What AI gave me	What I changed or kept	Justify your choice
1	Initial build	Build an interactive site from my tier guide and color scheme, hosted on GitHub Pages	Single-file site with Activity, Tier Guide and "Crosses a Tier" tabs	Kept the structure and colors; used my own tier guide text as the content	The content had to be my guide, not AI's version of it
2	Stoplight Assignment examples to classify	To use sample assignments to build a stoplight activity tab that allows teachers to choose a tier and justify their reasoning	Updated the site to include an interactive activity in which teachers choose a tier and justify their reasoning.	Kept majority of it, asked it to tweak some style choices	Gives teachers both a group discussion and a personal application. Overall it did a good job of anticipating the interactive style I wanted.
3	Site layout	Turn it into a homepage with two paths	Homepage with a Stoplight Activity (groups) and a Reflection page (individuals)	Kept it.	Gave two menu tabs and sections on the homepage that were an overview of the activities. Looked good and worked well.
4	Site layout	Include the tier guide as easy reference into the activity as a toggle	Collapsible drawers inside the Stoplight Activity	Kept	Allowed the teacher to visually reference the tier guide as needed.
5	Response collection	What are some ways we can collect responses easily and make it so teachers can have access to their responses	A script to integrate into a Google Sheet to have answers sent to the spreadsheet and code to email teachers a copy of their responses	Temporarily kept script for Google Sheets while contemplating. Abandoned email option for straight download.	Email option seemed too difficult and depending on attendance may exceed the allowed emails from Google. Instead, replaced it with a button to download responses as a txt file for teacher use.
6	Site style	Change the yellow text color with provided hex code examples	Tested different colors and gave feedback one which is more easily read	Kept a middle color.	The brighter option may be difficult to read from afar and the darkest option was too brown.

#	Part of the assignment	What I asked	What AI gave me	What I changed or kept	Justify your choice
7	Footer	Remove the footer	Removed footer completely	I asked it to return the footer color but not text	I liked the design of the footer but the text it plugged in was superfluous.
8	Bug fix	Tabs threw an error in the preview so I asked AI to resolve it	Wrapped the navigation code in a try/catch	Kept the change to resolve the bug	Error needed to be resolved. Also asked Claude to explain the error and resolution so I could understand it.
9	Site layout	Add a disclosure tab using the attached word doc (template) and pdf (finished example)	Created a disclosure tab with the options to download the template as a word doc and completed log for the site as a pdf and open it in another tab as a pdf. Also formatted the disclosure log in-line with the page.	Removed the in-line disclosure tag.	I want the participants to open the PDF to see it displayed in the same format as the template log. To get some practice, the AI walked me through the steps to remove it and I did it manually.
10	Site layout	Double check my split css, js, and index files	Gave feedback on whether or not I messed up splitting the index into html/js and css. It suggested some ways to tidy the code	Kept my changes and implemented some of the tidying suggestions	Needed to clean up the structure.
11	Bug Fix	Two bugs popped up. Tier Guide image no longer shows when expanded. Assignment no longer shows the assignment	Problem-solved that it is still listening for an input I had removed.	Manually implemented changes and had Claude check the files	Cleaned up some bugs that arose from earlier cleaning of structure.
12	Site Layout	Update Reflection to reflect new ideas	Updated the reflection tab to include new questions	Kept all changes to the reflection tab	Awaiting input from team to see what to change.
